The Covid-19 pandemic has disrupted every kind of education, from schools to universities, and has forced educational institutions to adapt and function in the virtual world. The future of education is being envisioned in a new way, with more emphasis on digital learning and online assessments.

However, the pandemic has also highlighted the need for greater autonomy and innovation in education. One of the standout examples is the work of Azim Premji Foundation, which has been providing education to the children of migrant workers in India. The foundation has been working with local communities to ensure that every child has access to quality education.

As schools reopen, it will be crucial for teachers and educational institutions to prepare for this new normal. The government and private schools will have to work together to ensure that every child has access to quality education, regardless of their socio-economic status. The education ministry will also have to rethink its role in the education system and work towards a more inclusive and equitable future for all.

In conclusion, the pandemic has presented us with an opportunity to rethink the future of education. It is time for educational institutions to adapt and evolve to meet the challenges of the 21st century. With the right strategies and policies in place, we can ensure that every child has access to quality education, and we can build a brighter future for all.
